Application/Control Number: 10/667,654

Art Unit: 1793

Applicant's election with traverse of claims 1-10 in the reply filed on July 25, 2007 is acknowledged. The traversal is on the ground(s) that the restriction requirement is contingent on the allowability of claims 1-10 and the joinder of other claims in the Preliminary Amendment since they are dependent thereon. This is not found persuasive because the dependent claims 13,14 are still drawn to a patentably distinct gas separation process.

The requirement is still deemed proper and is therefore made FINAL.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-10,15-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, "the formation of a gel or a solution" lack(s) proper antecedent basis in the claim(s).

In claim 1, "the crystallization of the zeolite" lack(s) proper antecedent basis in the claim(s).

In claim 1, "the elimination of residual agents" lack(s) proper antecedent basis in the claim(s).

In claim 1, "stage (a)" lack(s) proper antecedent basis in the claim(s).

In claim 1, "stage (c)" lack(s) proper antecedent basis in the claim(s).

In claim 2, "stage (a)" lack(s) proper antecedent basis in the claim(s).

Art Unit: 1793

In claim 3, "stage (a)" lack(s) proper antecedent basis in the claim(s).

In claim 4, "stage (c)" lack(s) proper antecedent basis in the claim(s).

In claim 6, "stage (a)" lack(s) proper antecedent basis in the claim(s).

In claim 8, "MFI-structural type" is indefinite due to the word "type."

In claim 10, "the temperature" lack(s) proper antecedent basis in the claim(s).

In claim 16, "the crystallization time" lack(s) proper antecedent basis in the claim(s).

In claim 16, "MFI-structural type" is indefinite due to the word "type."

In claim 18, "the crystallinity" lack(s) proper antecedent basis in the claim(s).

In claim 19, "the crystallinity" lack(s) proper antecedent basis in the claim(s).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* **v.** *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Application/Control Number: 10/667,654

Art Unit: 1793

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-10,15-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chau '495 or Anstett '263 or Anstett '427.

Chau, Anstett '263 and Anstett '427 each suggests the instantly claimed process of making a supported zeolite membrane including ranges of the molar ratio of water to silica, the time and temperature of crystallization which are within or overlap those instantly claimed but may differ in that the crystallinity is not stated. See the abstract, cols. 3-6 and example 1 of Chau; and the abstract and examples of each Anstett reference.

Because the taught process is the same as that instantly claimed each would form the zeolite membrane having the instantly claimed crystallinity as well as n-butane permeance.

The subject matter as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to select the portion of the prior art's

Art Unit: 1793

range which is within the range of applicant's claims because it has been held to be obvious to select a value in a known range by optimization for the best results, see In re-Boesch, 205 USPQ 215.

The subject matter as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to have selected the overlapping portion of the range disclosed by the reference because overlapping ranges have been held to be a prima facie case of obviousness, see In re Malagari, 182 USPQ 549.

Any difference imparted by the product by process limitations would have been obvious to one having ordinary skill in the art at the time the invention was made because where the examiner has found a substantially similar product as in the applied prior art the burden of proof is shifted to the applicant to establish that their product is patentably distinct not the examiner to show the same process of making, see In re Brown, 173 USPQ 685, In re Fessmann, 180 USPQ 324, In re Spada, 15 USPQ2d 1655, In re Fitzgerald, 205 USPQ 594 and MPEP 2113.

Claims 9,10,17,20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Barri '664 or Lai '650 or Deckman '366 or Anthonis '457 or Verduijn '289 or Vroon et al.

Each of Barri, Lai, Deckman, Anthonis, Verduijn and Vroon suggests the instantly claimed supported zeolite membrane but may differ as to the process of making. See the abstract of each.

Any difference imparted by the product by process limitations would have been obvious to one having ordinary skill in the art at the time the invention was made because where the examiner has found a substantially similar product as in the applied prior art the burden of proof is shifted to the applicant to establish that their product is patentably distinct not the examiner to show the same process of making, see In re Brown, 173 USPQ 685, In re Fessmann, 180 USPQ 324, In re Spada, 15 USPQ2d 1655, In re Fitzgerald, 205 USPQ 594 and MPEP 2113.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven Bos whose telephone number is 571-272-1350. The examiner can normally be reached on M-F, 9AM to 6PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stan Silverman can be reached on 571-272-1358. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
